proof your business
energy costs?

ARE YOU READY TO FUTURE PROOF YOUR BUSINESS ENERGY COSTS?

At Finance 4 Zero Emissions, we're your specialist finance broker focused exclusively on arranging attractive and competitive finance for businesses looking to make better energy choices and savings for their business.

In the face of rising energy and fuel costs, our role as a specialist finance broker for zero and low emissions assets has become more important than ever.

We partner with one of the most reputable finance brokerage companies in the UK, **EFT Finance Limited**, to help empower UK businesses to invest in assets that will help them save on their energy bills and build a more sustainable future.

We work with 20 reputable partner lenders to secure attractive finance solutions for our clients on all types of renewable energy projects - and we will always strive to find the most competitive rates and suitable repayment terms to match your business cash flow.

Best wishes,

Colin

What is NET ZERO?

Net zero for your business means achieving a state in which activities in your value chain result in no net impact on the climate.

To deliver on the UK's legally binding net zero 2050 target, UK businesses will be required to take action and do their bit for the environment.

It's estimated that one sixth of the global economy is subject to a net zero target, but what exactly is net zero? What does net zero mean for your business and what actions should you take to reduce your carbon footprint – both now and going forward?

"Going green" isn't just great for the environment; it can help your business save money **and** improve your brand reputation. By integrating energy sustainability into your business strategy, you can work towards achieving both your financial and your environmental goals.

There are many potential routes to carbon footprint reduction and net zero, but getting started is key. There are several actions you can implement now, such as switching to electric vehicles, switching to energy from renewable sources - and implementing low-cost energy efficiency measures, such as LED lighting.

Solar panels and battery storage, ground source heat pumps, LED lighting, biomass boilers and CHP units can all yield positive returns on investment.

Depending on your requirements and your short/long-term goals going forward, we can arrange flexible and attractive finance options on the various assets we highlight on the following pages.

**ELECTRIC
CARS**

**ELECTRIC
VANS**

**ELECTRIC
MACHINERY**

**ELECTRIC GOLF BUGGIES
& UTILITY VEHICLES**

YOUR DEDICATED FINANCE BROKER 4 ZERO & LOW EMISSIONS ASSETS

SOLAR PANELS

Solar PV panels enable businesses to generate their own free electricity, lower their energy bills, generate extra income by sometimes selling electricity back to the grid, and reduce their overall impact on the environment.

If your premises are suitable - installing solar could be a great move to a more sustainable future.

Lower energy costs, having less reliance on the grid - and a greater ROI are just a few of the key benefits of installing solar panels.

BIOMASS BOILERS & CHP

Biomass boilers are similar to conventional gas boilers in the sense that they provide you with space heating and hot water for a building.

However, instead of using gas or oil to produce heat, biomass boilers instead combust wood pellets, chips or logs.

They are a cost-effective way to heat a building; it's safe to say that biomass is cheaper per kW when compared with other fuels such as oil, and it costs less than gas too. Biomass energy is also a practical way to dispose of waste wood.

GROUND SOURCE HEAT PUMPS

Heat pumps are suitable for many business and may also reduce your energy bills, depending on the system you are replacing.

A heat pump captures heat from outside and moves it into your premises. It uses electricity to do this, but the heat energy delivered to your premises is much more than the electrical energy used to power the system.

When compared against your average business premises heating system, GSHP's can provide an excellent return on investment.

ELECTRIC VEHICLES

The benefits of bringing EV's into your business go far beyond reducing harmful emissions. As a business owner, it could make financial sense, as well as being a positive move for the environment.

Alongside tax and grants, running electric vehicles provides excellent cost reductions over the course of your ownership.

When comparing running costs to a petrol or diesel car, an EV can be driven for as little as 1p per mile, compared to 8 to 10p per mile.

FINANCE 4 ZERO EMISSIONS

OUR FINANCE SOLUTIONS

HIRE PURCHASE

Your business owns the asset outright at end of the finance agreement.

Flexible and cost-effective with structured payments.

FINANCE LEASE

Benefit from use of the asset without full ownership.

Typically lower deposits than HP solutions & you can spread the VAT element over the finance term.

WE HAVE 20 PARTNER FUNDERS ON OUR LENDING PANEL

CREDIT LINES

Access funding fast with a pre-approved credit line.

Credit lines are flexible as long as used within the funder approved timelines.

BUSINESS LOANS

We can help you secure a lump sum to invest in your business.

Fund the purchase of more land or buy new zero and low emissions assets.

PLEASE NOTE: ALL FINANCE APPROVALS ARE SUBJECT TO CREDIT CHECKS & STATUS
